

TASKS

1. Handling Missing values:

After removing duplicates, finding null values in the Category column as per product name, and changing the category names into a consistent format, I calculated the average price for the null values based on their respective categories.

I calculated the average price for the Electronics category using the AVERAGEIF() function and used the calculated value to fill the null value under the Electronics category. The product was Headphones, and the calculated average price was 555.833. After using the ROUND() function, the value was rounded to 556.

Product ID	Product Name	Brand Name	Price (\$)	Quantity	Category
28-JAN-US	Laptop	Dell	1000	30	Electronics
11-APR-US	Smartphone	Samsung	900	25	Electronics
07-JUN-UK	Headphones	Sony	45	50	Electronics
05-SEP-UK	Tablet	Apple	500	25	Electronics
17-JUN-IN	Laptop	HP	950	15	Electronics
18-FEB-CA	Smartwatch	Fitbit	150	20	Electronics
16-APR-ES	Headphones	Bose	250	10	Electronics
20-AUG-CN	Smartwatch	Huawei	180	15	Electronics
27-JAN-IT	Laptop	Asus	980	10	Electronics

19-JUL-BR	Fitness Tracker	Xiaomi	150	30	Electronics
29-SEP-CA	Smartphone	Google	800	45	Electronics
24-MAY-CA	Fitness Tracker	Garmin	130	5	Electronics

I calculated the average price for the Fashion category using the AVERAGEIF() function. The null value under the Fashion category was for Sunglasses. The calculated average price was 76.66666667. After using the ROUND() function, the value was rounded to 77.

Product ID	Product Name	Brand Name	Price (\$)	Quantity	Category
15-FEB-US	Sneakers	Nike	80	15	Fashion
19-JUL-UK	T-shirt	Adidas	30	40	Fashion

01-MAR-CA	Dress	Zara	80	50	Fashion
02-DEC-CA	Jeans	Levi's	50	50	Fashion

The screenshot displays the Microsoft Excel interface. The main workspace contains a table with the following data:

Product ID	Product Name	Brand Name	Price (\$)	Quantity	Category
14-OCT-UK	Hiking Boots	Timberland	130	10	Outdoor
14-AUG-US	Camping Tent	Coleman		10	Outdoor

Below the table, a formula bar shows the calculation: `=AVERAGE(K39:K40)`, resulting in the value 130. The Queries & Connections pane on the right lists three queries: Table3 (3 rows loaded), Table3 (2) (34 rows loaded), and Table3_2 (31 rows loaded). The bottom status bar indicates the active dataset is Table3_2.

I filled the null values in the Category column based on the Product Name. I used the Product Name to identify the correct category and then replaced the null Category values with the corresponding category. The values 1, 2, 3, and 4 indicate the null values that were identified and filled based on the Product Name.

2. Correcting Inconsistent Data:

In Power Query, I used the Find and Replace option to correct spelling mistakes and inconsistent data in the Category and Product Name columns.

Using Find and Replace, I changed the category name from “Electroni” to “Electronics.” I also corrected the formatting of product names, such as changing “headphone” to “Headphone”, “smartphone” to “smartphone” and “laptop” to “Laptop.”

4. Splitting and Merging Data:

Using the Split Column option in Power Query, I split the Product ID using a delimiter. I selected the option to split at the left-most delimiter. This split the Product ID into two columns: the first column contains the manufacturing date, and the second column contains the country code. The steps can be seen in the Applied Steps section.

Product ID.1	Product ID.2	Product Name	Brand Name	Price (\$)	Quantity	Category
28-JAN	US	Laptop	Dell	1000	30	Electronics
15-FEB	US	Sneakers	Nike	80	15	Fashion

Using same data type option I changed price data type as currency.

The screenshot shows the Power Query Editor interface. The 'Data Type' dropdown menu is open, and 'Currency' is selected for the 'Price (\$)' column. The 'Reordered Columns' list shows the columns in the order: 'Manufacturing date', 'Product Brand', 'Price (\$)', 'Quantity', and 'Category'. 6.Conditional Formatting:

Using data bar option in conditional formatting I created data bar for price columns.

The screenshot shows the Microsoft Excel interface with the 'Conditional Formatting' menu open. The 'Data Bar' option is selected, and a data bar is visible in the 'Price (\$)' column. The data bar shows a green gradient, indicating the relative values in the column.
